## **Requirement Analysis Phase**

| Date         | 28/10/2025                  |
|--------------|-----------------------------|
| Team id      | NM2025TMID01396             |
| Project name | Laptop Request Catalog Item |
| Maximum mark | 4 Marks                     |

## **Project Design Phase-II**

Solution Requirements (Functional & Non-functional)

| FR<br>No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)  |
|-----------|-------------------------------|---|
| FR-1      | Catalog Item Access           | User can find and open the "Laptop Request" item in the service catalog.    |
|           |                               | User can view available laptop models (e.g., Standard, Pro, Lightweight).   |
| FR-2      | Laptop Selection              | User must select one model.   |
|           |                               | User can see the specifications and cost for each model.                    |
| FR-3      | Request Details               | User must provide a business justification for the request.                 |
|           |                               | User can specify required software to be pre-installed.                     |
|           |                               | User can submit the completed request form.                                 |
| FR-4      | Submission & Workflow         | System automatically routes the request to the user's manager for approval. |
| FR-5      |                               | Manager can approve or reject the request.                                  |
|           | Approval Process              | Manager can add comments to the approval/rejection.                         |
|           |                               | Upon approval, a task is created for the IT hardware team for fulfillment.  |
| FR-6      | Fulfillment & Notification    |   |
|           |                               | User receives email notifications on submission, approval, and completion.  |

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR<br>No. | Non-Functional<br>Requirement | Description   |
|-----------|-------------------------------|---|
| NFR-<br>1 | Usability                     | The request form should be clear and easy for any employee to fill out in under 5 minutes.                                |
| NFR-<br>2 | Security                      | Only authenticated users can submit requests. Approvals can only be made by designated managers.                          |
| NFR-<br>3 | Reliability                   | The approval workflow must trigger correctly every time. No submitted requests should be lost.                            |
| NFR-<br>4 | Performance                   | The catalog item and its options (laptop models, specs) must load within 3 seconds.                                       |
| NFR-<br>5 | Availability                  | The service catalog should be available 24/7 for users to submit requests.  |
| NFR-<br>6 | Scalability                   | The system must handle a high volume of requests (e.g., during a company-wide hardware refresh) without performance loss. |
